

THE PROBLEM

Water is life, but why is access to clean water still difficult?

Thailand Crisis of Unsafe & Insufficient Drinking Water

2.1 million Households at Risk

Millions of Thai families still lack access to guaranteed safe drinking water (UNICEF/WHO)

Risk of Contamination

Substandard production leads to unsafe water in the community

Outdated Equipment

Local plants struggle with old machinery that fails to meet standards

Threat to Public Health

Unsafe drinking water causes illness and impacts everyone's quality of life

WHO WE ARE

AGILE ASSETS

Thailand-based industrial equipment leasing provider focused on high-growth SMEs in FMCG sectors. We manage USD 13 million in assets, with an average ticket size of USD 300,000. Capital is deployed to support SDG 6 (clean water access) and SDG 12 (responsible production). The firm differentiates itself through a partnership-led model that combines lease financing with hands-on business advisory and engineering support, strengthening commercial or technical execution at the SME level.

6 CLEAN WATER AND SANITATION

Agile Assets Solution

Improved Access to Clean Drinking Water

We support manufacturers in expanding clean drinking water production capacity across multiple provinces in Thailand, allowing them to install modern production lines. By localizing production closer to end consumers, we help improve supply reliability and lower distribution costs, enabling affordable access to certified drinking water for local communities. Our clients typically price their products at a 40-50% discount to bottled water sold through modern-trade channels.

Expanding Access
to Clean Water

Advancing Production
with Technology

>40-50% Cheaper

1

Sustainability Campaigns

Financing Solar PV Projects

We support solar PV projects in bottled water producers, ice production plants and pig/chicken farms to lower their energy footprint.

End-user Benefits

No additional collateral required

Competitive interest rate

12 RESPONSIBLE CONSUMPTION AND PRODUCTION

2

Smarter Use of PET Bottles

We encourage increased shipments of large-format waters (typical target 25% higher)

Increase proportion of 1500ml and 5000ml packaging relative to 350ml and 600ml formats. Large formats used less plastic for each unit water consumed. They also have substantially higher probability of reuse.

End-user Benefits

Get rebates on interest payments if shipment goal is met

12 RESPONSIBLE CONSUMPTION AND PRODUCTION

3

Recycling PET Bottles

We encourage bottled water clients to incorporate recycled PET into bottle production, typically accounting for at least 25% of input materials in the preform and blow-molding process.

Thailand's regulatory framework permits the use of food-grade recycled PET for this application. Recycled PET offers comparable material performance to virgin PET while generally providing a modest cost advantage, supporting both environmental and economic efficiency.

End-user Benefits

Get rebates on interest payments if recycle raw material use goal is met

12 RESPONSIBLE CONSUMPTION AND PRODUCTION
